

How to connect to my Dropbox:

- Click on a blank portion of your desktop.
- Type Command-K (the shortcut for connect to server).
- Click on the “browse” button on the bottom of the Connect to Server dialog box.
- Scroll down to my computer, which is named “TS09600-SC” (about 2/3 down the list).
- Drag this folder into my dropbox (note: you won’t be able to modify or even view any folders/files in the dropbox). I’ll have the folder on the LCD projector, so you can verify that it got to my computer.
- AT THE END, **DISCONNECT** FROM THE SERVER (via hitting the “eject” button) – there are only a limited amount of concurrent connections allowed (so if you don’t disconnect, one of your classmates won’t be able to connect).
